Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Baumann.

Baumann teaches a method and apparatus for detecting a plate or sheet shaped body having a plurality of optical emitters and receivers (11 and 12) parallel to each face of a body and one another, a first comparative circuit (15) and a second comparative circuit (20) for judging reference values from a detection signal received by receivers (12), and a control section 27 for outputting a plurality of different drive signals (28) to the plurality of light emitting means such that they are controllably turned on and off as recited in claims 1-3.

Further Figs. 1-4 show that the first and second optical sensor are disposed that light emitted in the second time period by the second light emitting section is direct on upon the second receiver and obliquely incident on the first receiver as recited in claim 4, the monitoring circuit comprises an output lever adjuster to normalize the output signal (Col. 4) as recited in claims 5 and 7, the monitoring circuit comprises a comparative circuit to compare the output of a light receiving point and a first judgement reference value (Col. 3 Lines 4-57) as recited in claims 6 and 8.

Responses to Arguments

Applicant's arguments with respect to claims 1-2 have been considered but are moot in view of the new ground(s) of rejection.
